

PG BARRIER GATES AND ACCESS

Features of the PG 6 Barrier Gate include:

- * Meets **CE** approval and safety standards
- * Standard use of Torque Motors
- * Compact size in a range of mild steel or stainless steel as an option.
- * Available in push-button, remote control, loop detector or manual operation.
- * Automatic raise if power fails.
- * Operates up to a 6 meter arm.
- * Fast opening and closing time.
- * Up to 2 plug-in self-tuning loop detectors

The PG Barrier Gates Barrier is designed to offer maximum reliability, efficient operation and easy maintenance. The electronic parts are modular so that all maintenance can be completed with minimal down time ensuring optimal efficiency of the equipment.

The barrier gates can be used in a wide variety of applications including parking, and vehicle security access. The equipment can also be used in conjunction with roller shutter-door and turnstyle access.

The barrier is compatible with all ticket issuing devices, and access control systems. A range of ancillary devices including lane counters, warning lights, sirens, jackknife assembly, on-line communications and traffic lights (go/stop) can be fitted to the barrier gates as optional extras.
