The PG 5 parking ticket dispenser is a fully automatic ticket vending machine. The design is such that it offers the maximum in reliability, efficient operation and easy maintenance, thereby providing an economical solution to automatic parking access control.

The PG 5, is fitted with a self turning vehicle detector. When the presence of a vehicle is detected, a ticket can be issued automatically. This can also be used as an arming signal if the push button issue is fitted.

When the ticket is issued and is drawn from the mouth a signal is given for the barrier to raise, at which time if the Ticket vend interlock connections have been made from the PG 6 barrier, the PG 5 is blocked from issuing a further ticket until the barrier is lowered.

The ticket is imprinted with, time, date and 8-character location code and 7-digit serial number.
